

HPSG Analysis and Computational Implementation of Indonesian Passives

David **Moeljadi** and Francis **Bond**

Division of Linguistics and Multilingual Studies,
Nanyang Technological University, Singapore

The 25th International Conference on Head-Driven Phrase Structure Grammar
(HPSG 2018),
The University of Tokyo, Komaba Campus

1 July 2018

Indonesian passives: Outline

1. Introduction
2. The data
3. Bound forms of pronouns
4. Analysis
5. Conclusion

Aim of this study and its limitations

- Standard, formal Indonesian
- Passive type 1 (P1) and type 2 (P2) (Dardjowidjojo, 1978), (Sneddon et al., 2010)
- Monotransitive only (ditransitive will not be discussed)
- computationally implementable
 - ▶ Head Driven Phrase Structure Grammar (HPSG) (Pollard and Ivan A Sag, 1994; Ivan A. Sag, Wasow, and Bender, 2003)
 - ▶ Minimal Recursion Semantics (MRS) (Copestake et al., 2005)
 - ▶ Indonesian Resource Grammar (INDRA) (Moeljadi, Bond, and Song, 2015)

“To analyze and develop a detailed model (rules) of syntax and semantics of passive sentences in standard Indonesian, explicit enough to be interpreted by a computer, focusing on implementation rather than theory”

Indonesian passives type 1 and type 2

- Two passive constructions: Dardjowidjojo, 1978 Sneddon et al., 2010 Chung, 1976 Cole, Hermon, and Tjung, 2006
 - ① Passive Type 1 (P1) / Canonical passive
 - ② Passive Type 2 (P2) / Object preposing passive
- P1 and P2 are in (near) complementary distribution
 - ▶ P1: 3 agents (both pronouns and nouns)
 - ▶ P2: 1 and 2 agents *or* pronouns (including 3 agent, also pronoun substitutes, including proper nouns)
 - ▶ P1 and P2 overlap with respect to 3 pronoun agent
- Syntax
 - ▶ Word order: patient/undergoer in active → passive subject
- Semantics
 - ▶ Semantically transitive clause
 - ▶ The semantic roles of the arguments in active and its passive counterpart are the same
 - ▶ The promoted arguments are *focus-or-topic*, the demoted arguments are *non-topic* (Song, 2017)

Passive Type 1

$NP_{\text{Theme/Patient}} + \text{Neg/Aux} + di\text{-}V + \text{oleh} + NP_{\text{Agent}}$

- *di-* is prefixed to the verb, phonologically and orthographically part of the verb, always immediately to its left
- NP agent
 - ▶ third person pronoun, common noun, proper name
 - ▶ follows the verb (post-verbal)
 - ▶ demoted to adjunct, optional
 - ▶ can be preceded by a semantically empty preposition *oleh* “by”
 - ▶ with 3SG agent, the bound form *-nya* may occur
- auxiliaries and negation precede the passive *di-* verb

Passive type 1

- (1) a. *Budi sudah dijemput.*
Budi PRF PASS-pick.up
“Budi has been picked up.”
- b. *Budi sudah dijemput (oleh) dia/mereka/istrinya/Adi.*
Budi PRF PASS-pick.up by 3SG/3PL/wife=3SG/Adi
“Budi has been picked up by him/them/his wife/Adi.”
- c. *Budi sudah dijemputnya.*
Budi PRF PASS-pick.up=3SG
- d. *Budi sudah dijemput olehnya.*
Budi PRF PASS-pick.up by=3SG
- e. * *Budi sudah dijemput aku/kamu/kami/kalian.*
Budi PRF PASS-pick.up 1SG/2SG/1PL.EXCL/2PL

Passive type 1 with coordination

- (2) a. *Budi sudah dijemput (oleh) Adi dan Ani.*
Budi PRF PASS-pick.up by Adi and Ani
“Budi has been picked up by Adi and Ani.”
- b. **Budi sudah dijemputnya dan Ani.*
Budi PRF PASS-pick.up=3SG and Ani
- c. **Budi sudah dijemput olehnya dan Ani.*
- d. *Budi sudah dijemput dan disuntik (oleh) Adi.*
Budi PRF PASS-pick.up and PASS-inject by Adi
“Budi has been picked up and injected by Adi.”
- e. *Budi sudah dijemput dan disuntiknya.*
- f. *Budi sudah dijemput oleh Adi dan disuntik Ani.*

Passive Type 2

$NP_{\text{Theme/Patient}} + \text{Neg/Aux} + NP_{\text{Agent}} + \text{bare V}$

- the verb appears in bare stem form
- NP agent
 - ▶ all pronouns, ‘pronoun substitute’ (kinship terms such as *bapak* “father”, *ibu* “mother”), personal names (Budi, David, ...) meaning “you” or “I”
 - ▶ precedes the verb (pre-verbal)
 - ▶ not demoted to adjunct, obligatory, an argument (Arka, Manning, et al., 1998)
 - ▶ cannot be preceded by any prepositions such as *oleh* “by”, nothing can intervene the NP agent and the bare verb
 - ▶ with 1SG and 2SG agents, the bound form *ku-* and *kau-* may occur
- auxiliaries and negation precede the agent (cannot come between the agent and the bare verb)

Passive type 2

- (3) a. *Budi sudah dia/mereka/aku/kamu/kami/kalian jemput.*
Budi PRF 3SG/3PL/1SG/2SG/1PL.EXCL/2PL pick.up
“Budi has been picked up by him/them/me/you/us.”
- b. *Budi sudah bapak jemput.*
Budi PRF father pick.up
“Budi has been picked up by me/you (father/old man).”
- c. *Budi sudah Adi jemput.*
Budi PRF Adi pick.up
“Budi has been picked up by me/you (Adi).”
- d. *Budi sudah kujemput.*
Budi PRF 1SG-pick.up
“Budi has been picked up by me.”
- e. *Budi sudah kaujemput.*
Budi PRF 2SG-pick.up

Passive type 2 with coordination

It is impossible to coordinate two pronouns as actors or two verbs with a single actor (Musgrave 2001)

- (4) a. ?*Budi sudah kami dan mereka jemput.*
Budi PRF 1PL.EXCL and 3PL pick.up
“Budi has been picked up by us and them.”
- b. ?*Budi sudah dia tunggu dan jemput.*
“Budi has been waited and picked up by him.”
- c. ??*Budi sudah kutunggu dan jemput.*
- d. *Budi sudah kutunggu dan kujemput.*
- e. *Budi sudah kutunggu dan kaujemput.*
“Budi has been waited by me and picked up by you.”

Bound forms *ku-*, *kau-*, *-nya*

Clitics vs inflectional affixes (Zwicky & Pullum 1983) (Zwicky and Pullum, 1983)

- clitics can attach to words of any category (or part-of-speech), while the inflectional affixes are quite specific in their selections of stems
- no syntactic operations exist which treat a word combined with clitics as a unit, while words with inflectional affixes are treated as units

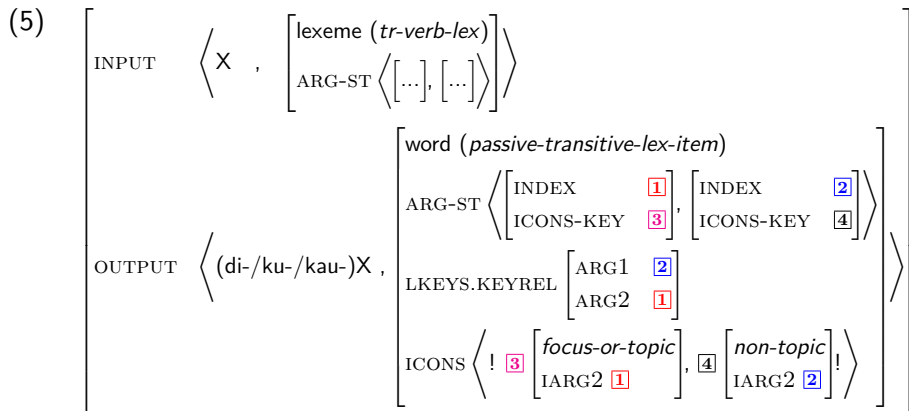

ku- “1SG” and *kau-* “2SG” are inflectional affixes, *-nya* “3SG” is a clitic

- *-nya*
 - ▶ treated as a word (tokenized)
- *ku-* and *kau-*
 - ▶ treated as prefixes (not tokenized)
 - ▶ the relationship of the agent and the verb is morphological rather than syntactic

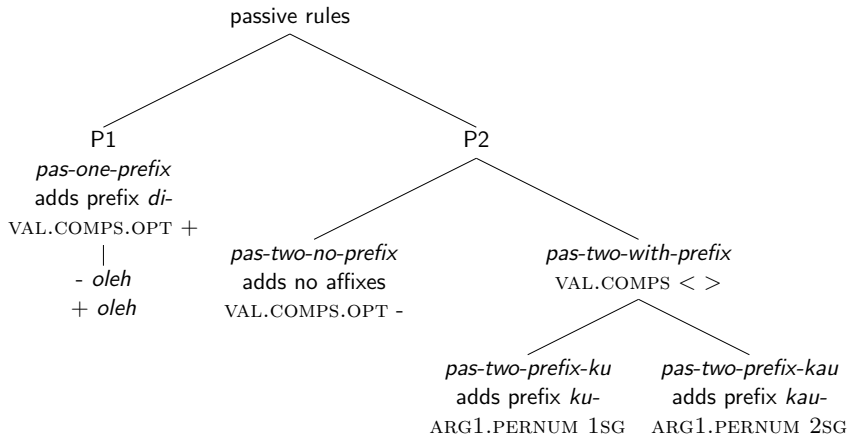

NP coordination rule: cannot take bound forms *-nya*, *ku-*, *kau-*

Passive as an inflectional rule

Indonesian passive lexical rules

(1) P1 without *oleh*

(1) P1 without *oleh* (tree and DMRS)

(8)

(9)

(2) P1 with *oleh* “by”

- *oleh* adds nothing to the meaning except the information that the COMPS of the passive verb is coindexed with the COMPS of *oleh*
- The semantics of the PP headed by *oleh* is identical to the semantics of *oleh*'s NP complement

(3) P2 without bound forms

(3) P2 without bound forms (tree and DMRS)

(13)

(14)

(4) P2 with bound forms (tree and DMRS)

(15)

(16)

Summary and conclusions

- Bound forms *-nya, ku-, kau-*: tokenization
- constraint in NP coordination rule
- type hierarchies for nouns
- inflectional rules for P1 and P2
- *oleh* “by” as a semantically empty preposition
- *comp-head* rule, HEAD-DTR is of type *passive-two*
- Future work: evaluation

Thank you

Terima kasih
